

Saviour Lutheran School

Enhancing Mosquito Prevention Measures

(Circular No.: E115/ 2025-2026)

Dear Parents/Guardians,

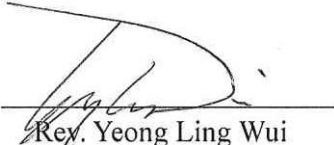

The school is located near a hillside covered with over 10,000 feet of vegetation where it is outside the school area. Although the environment is natural and pleasant, mosquitoes problems are prevalent especially in the rainy season. The school has strengthened corresponding anti-mosquito measures, including inviting Lands Department and FEHD personnel to remove weeds, clean drains, and spray mosquito repellant in the school area. There are three pest killer machines and several outdoor pest killing lamps on campus. In addition, pest control service is regularly conducted to prevent mosquitoes. However, due to natural areas adjacent to the campus location, some students are still bitten by mosquitoes, for which the school is deeply concerned. In view of this, the school advises parents to:

(1) Apply mosquito repellent and mosquito ointment to your child or use other personal anti-mosquito measures every day before going to school.

(2) If your child is susceptible to mosquito bites, kindly bring your own mosquito repellant and put it in the schoolbag. Under special circumstances, parents may apply to the school for students to wear proper sportswear.

Yours faithfully,

Rev. Yeong Ling Wui
Principal
